### ŒNOCHIPS® ARE \_\_\_\_\_

A range of chips for wine aging, drawing on the latest scientific knowledge about the œnological use of oak.

This top-of-the-line tool enables winemakers to obtain **distinctive, reproducible sensory profiles, while benefitting from a more rapid extraction rate.**

### THE ŒNOCHIPS® RANGE \_\_\_\_\_

ŒNOCHIPS® are available in three recipes, these blends have been validated via laboratory and cellar tests carried out by SEGUIN MOREAU's research department.

- **ŒNOCHIPS® R02:** this oak blend **aids in the expression of fruity aromas** and adds **elegant touches of oak** and structure, resulting in a **rich and deep** mouthfeel.
- **ŒNOCHIPS® R03:** this blend steers sensory profile markedly towards **soft, aromatic notes** (black fruit, chocolate, sweet spices) and adds **sweetness** on the palate.
- **ŒNOCHIPS® R228:** inspired by the toast level used on 228l barrels, this blend reveals **an intense and complex expression of ripe fruit** underpinned by the **delicate mineral and smoky notes** typical of prestigious terroirs.  
R228 offers **tension and silkiness** on the palate, enhancing the finish with a unique flavour experience!

### OPTIMIZING WINE/WOOD CONTACT TIME \_\_\_\_\_

ŒNOCHIPS® formulations integrate balanced oak sensations quickly into the wine, efficiently meeting production and marketing constraints.

Recommended contact time varies from 1 to 4 months, depending on desired œnological objective, comparing favorably with the 2 to 5 months aging time for many oak chips on the market.

## DID YOU KNOW?

The SEGUIN MOREAU research team has shown that the oenological properties of oak vary significantly from one individual tree to the next, right down to the plot of origin.

At the standard doses used for chips (2 to 6 g/l), this natural variability is exacerbated. Precise control of the composition of the wood used for CENOCHIPS® blends gives winemakers **precision and consistency**.

## QUALITY AND SAFETY

The CENOCHIPS® range is produced under strict manufacturing conditions intended to guarantee food safety and meet current regulatory requirements. The choice of highest quality packaging materials ensures maximum protection against potential contamination during transport and storage
